

How to print this

Your print-ready files are included. You arrange the printing.

At home

Use the sheet PDFs at Actual size or 100%. Turn off Fit to page.

For cards and tags, ask for matte card stock, about 200-250 gsm.

Check your printer's paper-weight limit. Cut along the dashed lines.

At a pharmacy photo kiosk

Upload the 4 x 6 or 5 x 7 PNG as a photo. Select the matching size.

Keep the whole design: turn off automatic crop or zoom.

Choose matte photo paper if available. Check the preview before ordering.

At a print shop

Give them the PDF marked bleed. Ask for a color print at actual size, with 3 mm bleed, trimmed on the crop marks. Use matte card stock for cards, or matte heavyweight photo paper for a framed print.

Your print designs

Each size arranges your page content for paper, with up to two photos.

Long messages and captions may be shortened; the QR opens the full page.

Waveform prints feature your selected voice artwork and recording title.

Gift tags come in Letter and A4; wallet cards use Letter. Cut on the lines.

Edit your design

Open a PPTX file in software like Canva or PowerPoint to edit the text and design.

Check the original paper size, fonts and crops after importing.

Keep the QR square and clear. Canva edits do not change your listening page.

QR with no background

The transparent PNG keeps your QR design with no background. Place it on a plain area with strong contrast. Keep its clear border intact.

The heart keeps its small backing. Use the regular PNG on busy artwork.

Before you give it

Scan the finished print with your phone and listen. Keep the QR clear of folds, frame edges and glossy glare. The link is unlisted; anyone you give the link or printed code to can open the listening page.
